Documents on structural engineering and building physics

In recent years, the HASSLACHER Group, together with other manufacturers, has supported the development of extremely valuable documents on the subject of cross laminated timber.

The planning brochure „**CONSTRUCTION WITH CROSS-LAMINATED TIMBER IN MULTI-STOREY BUILDINGS – Focus on Building Physics**“ provides an overview of the cross laminated timber product and highlights the topics of prefabrication, fire protection, sound insulation and moisture protection. Furthermore, it shows common built ups in cross laminated timber and suggests a large number of standard details.

The contents of „**Cross-Laminated Timber Structural Design – Basic design and engineering principles according to Eurocode**“ range from product description, fundamentals of calculation, ultimate limit states, serviceability limit states, design in case of fire to connection technology and building bracing as well as application examples.

This is supplemented by „**Cross-Laminated Timber Structural Design Volume 2 – applications**“ with a systematic list of examples, helpful tips and engineering methods for the approaches to the design of cross laminated timber constructions.

About the HASSLACHER group

As a supplier for modern timber constructions, the HASSLACHER Group convinces its customers around the world with a wide variety of products ranging from sawn timber and surfaced timber to glulam and cross laminated timber to structural finger jointed solid timber to glued laminated timber special components. In all this, we always focus on developing innovative solutions for modern products, efficient production and optimised logistics.

Founded in 1901, the family-owned company employs more than 1,800 people at eight production sites in Austria, Germany, Slovenia and Russia. With the locations of Magdeburg in the north of Germany and Sachsenburg in the south of Austria, the HASSLACHER Group is able to serve its customers throughout Europe as well as internationally in a much more flexible way and to reach them logistically in the best possible way. True to their motto “From **wood** to **wonders**.”
